21 Ogilvie St  
Dundas ON

Storm Water Mitigation + Landscape

Addendum No 1.

Please note the following clarifications:

- 1.1 A standard cold water hose connection will be made available for the Contractors responsible usage in performance of the work.
- 1.2 110 V power will be made available for the Contractors responsible usage (hand tools, etc) in performance of the work.
- 1.3 No permits are expected to be required for the work, as it is entirely on DVSA property with minimal change to grading and there are no connections to or impact on city services.
- 1.4 The existing soil(subgrade) to be removed is 'clean' as far as we know, as there is no known history of any hazardous activities or process on the property. The existing asphalt paving to be removed will need to be disposed of as typically required of asphalt paving.
- 1.5 Separate Price No. 2 noted on Dwg L1.01 is for the soakaway pit, piping and other work as necessary for its installation and operation, including patching of existing asphalt.
